

AT

ASHWANI TAYAL

AVP / SOLUTION ARCHITECT / SOFTWARE ENGINEER
T-71 PREM NAGAR II NANGLOI DELHI 110086

OBJECTIVE

An accomplished **Solution Architect** / Software Engineer having more than 13 years of work experience and looking for wider responsibilities and challenges.

TECHNICAL SKILLS

- **Languages:** PHP with Yii, API development in PHP & PostgreSQL, MySQL & MongoDB as backend, API integrations etc.
- **Web Technologies & Servers:** PHP, Yii Framework, CI Framework, HTML, CSS, Java Script, jQuery
- **Databases:** MySQL, MongoDB
- **Operating System:** Windows, Linux Ubuntu
- **Cloud:** AWS, Azure, GCP
- **IDE & Tools:** VS Code
- **Methodologies:** Object Oriented Programming (OOP), Database Management System (DBMS), Model View Controller (MVC)

PROFESSIONAL PROFILE

- More than 13 years of work experience in **Web Application Development, Solution Architect, System Design, System Implementation.**
- Key Competencies include PHP with **Yii Framework, MySQL, PostgreSQL, CI, API's, jQuery, Java Script, Microservices, AWS, GCP.**
- Team oriented player with interpersonal skills, self-motivated.
- Possess extensive knowledge of Software Development Life Cycle.

EDUCATION

Master of Technology (MTech) in Computer Science and Engineering (2012-2014):

School of PG Engineering, Bahadurgarh (**Maharshi Dayanand University**), Rohtak Haryana (72.59%)

Bachelor of Technology (B.Tech) in Information Technology (2007-2011):

Laxmi Devi Institute of Engineering and Technology, Alwar (**Rajasthan Technical University**), Kota RJ (74.24%)

PERSONAL DETAILS

Date of Birth: 31st July 1990.

Mob : (+91)9811199110.

WORK EXPERIENCE

Primus Partners

Assistant Vice President (October 2023 - Present)

Responsibilities:

Providing support as Solution Architect in various on-going projects. Creating SRS, FRS, and other technical documents. Identifying KPI's, Creating Prototype applications for demonstrating to stack holders and finally onboarding to various government platforms.

Projects:

AQI Alert System

Role: Solution Architect

Technologies: PHP, Yii2, PostgreSQL, REST APIs, IIHP Platform Integration

As the Solution Architect for the AQI Alert System, I designed and developed a web-based application to generate and escalate air quality alerts to government officials based on predefined conditions. The system included a dashboard to analyse responses received from various alerts and integrated with the IIHP Platform for real-time monitoring. RESTful APIs were developed for seamless data exchange, ensuring effective communication between the application and external systems, and enabling rapid escalation to relevant authorities in case of AQI thresholds being breached.

LIMS (Laboratory Information Management System)

Role: Solution Architect

Technologies: PHP, Yii2, PostgreSQL, REST APIs, IIHP Platform Integration

As the Solution Architect for LIMS, I designed and developed a web-based application to digitize laboratory processes for various laboratories under NCDC. The application streamlined test management, results processing, and sharing with concerned officers. I ensured seamless integration with the IIHP Platform for real-time data synchronization and reporting. Developed RESTful APIs to facilitate smooth communication between the LIMS platform and external systems, ensuring accurate and timely sharing of laboratory data.

POE Application

Role: Solution Architect

Technologies: PHP, Yii2, PostgreSQL, REST APIs, IIHP Platform Integration

As the Solution Architect for the POE (Point of Entry) Application, I developed a mobile-based application for collecting questionnaire-based responses from field officers at airport areas for surveillance. The app was integrated with the IIHP Platform to enable real-time data exchange. I designed and developed APIs to support the integration, ensuring smooth data collection, submission, and analysis of responses. The application enabled more efficient monitoring of health-related surveillance at key entry points.

Tree Plantation Application

Mobile and Web-based applications to monitor tree plantation derive in Maharashtra. As a Backend Developer and Solution Architect, I designed and developed a scalable tree plantation monitoring system for Maharashtra using PHP, Yii2, and PostgreSQL. I architected and implemented RESTful APIs to ensure seamless communication between mobile and web applications, enabling efficient data exchange. The mobile app featured offline functionality for data collection in remote areas, syncing once online. The web application, built with Yii2, provided a dashboard for tracking plantation progress and generating reports. The solution utilized PostgreSQL for robust data management, ensuring a reliable and scalable system for monitoring tree plantation initiatives.

Project Information Management System (PIMS)

Role: Solution Architect

Technologies: PHP, Yii2, PostgreSQL, REST APIs, Superset

As the Solution Architect for PIMS, I designed and developed the web and mobile applications used by the Ministry of Health and Family Welfare (MoHFW) to monitor AIIMS construction projects. The web application was built using PHP, Yii2, and PostgreSQL, with RESTful APIs integrated for smooth data communication. I also ensured the development of a mobile app with offline functionality for field data collection. The dashboard, used for project monitoring and reporting, was built on Apache Superset. The solution streamlined the tracking and management of AIIMS construction projects across India.

Uttarakhand Parivar Pechan Patra (UKPPP)

Role: Solution Architect

Technologies: PHP, Yii2, PostgreSQL, REST APIs, Python Django, React

As the Solution Architect for UKPPP, I am responsible for designing the system architecture, database schema, and API interfaces to support a state-wide digital identity and service delivery platform for families in Uttarakhand. I oversee end-to-end project management, ensuring seamless integration with multiple government departments for data exchange and service coordination. The system leverages a hybrid stack—PHP with Yii2 for administrative modules, Django for backend services, and React for a responsive user interface. My role involves close collaboration with stakeholders to ensure scalability, data integrity, and alignment with state digital governance goals

Critical Rivers

Senior Software Engineer (June 2023 – October 2023)

Projects:

Development and maintenance of ecommerce web applications. Integration with Etsy, Shopify etc.

Tata Medical and Diagnostics

Senior Software Engineer (Jan 2022 – June 2023)

Projects:

AMR (Antimicrobial Resistance Surveillance)

Web application to collect lab test data from Labs / Hospitals using multiple ways (API's / Web Application / Excel Bulk upload etc.) Then using the data to create analysis with multiple filters as required. This application is used to create treatment guidelines by Experts.

Development and Maintenance of Web Applications. Creating analytics module based on information entered by various labs from PAN India.

Konnifel

Web applications for interns and professors where professors can post any internships, and any student can apply to those internships. It consists of multiple modules like an exam module / recommendation module / payment gateway integration etc.

Working as a team lead managing development among the development team, development of modules, architecture the application are the major works handled by me.

Spice Works Ziff Davis

Software Engineer SE II (Aug 2021 – Jan 2022)

Projects:***Launchpad*****Responsibilities:**

Development of Web Application used for Lead Generation. Development and Maintenance of Casper Desktop Application used for Social Verification.

Cisco Systems (Velocis Systems Pvt Ltd)***Sr. Software Engineer (Nov 2020 – Aug 2021)*****Projects:****CNAAP (CISCO NETWORK AUTOMATION & ANALYTICS PLATFORM)****RESPONSIBILITIES:**

Bug fixing in existing application, API development, and Full stack development of new modules.

Digital India Corporation (Formally MEDIA LAB ASIA)***WEB DEVELOPER (OCT 2015 – NOV 2020)*****Projects:****IIDS (Interactive Information Discrimination System)**

Push and pull model for farmers, experts and other role type users implemented as Area based agro advisory for farmers. Currently deployed in **Andra Pradesh, Telangana (<http://akps.in>) and 3 states of North East (Meghalaya) (<http://1917iteams.in>), Mizoram and Tripura (<http://m4agri.dic.gov.in>). Recently launched as Krishi Sarathi to be implanted in PAN India.**

Full stack development of new modules management of existing modules. Development of API's for Applications under UMANG Platform and Toll Free Number operated to give farm advisories to farmer.

QR3CMS (QR Coded Check Post Management System)<https://icms.digitalindiacorporation.in/I2CMS>

A Web and mobile based solution for transporting of minerals used in Meghalaya.

Full stack development of new modules management of existing modules. Development of API's for mobile Application and Click2call using IVRS.

IPMP (Infra Project Management System)<https://pms.digitalindiacorporation.in/PMS>

Web based tool for monitoring the progress of infra projects going in Meghalaya directly monitored by CM Meghalaya.

Full stack development of new modules management of existing modules. Development of API's for mobile Application and Click2call using IVRS.

CDAC – Delhi (GA Digital Web word)***Web Developer (Sep 2013 – Oct 2015)*****Projects:****CeG Web Portal**

Details: Web application to demonstrate e governance services and applications to Indian Citizens with a discussion forum where any one can register and post, comment on current trends. Module contains

managing visit requests, collecting feedback, conference registration, managing discussion forum. All the application has admin module as well for backend operations.

Environment: PHP with Yii, MySql.

Tools: NetBeans, Mercurial, Bit Bucket, Vim editor, File Zila.

Responsibilities:

Full stack development and management of CeG portal with hosting, security clearance and all other parts of web development.

(www.ceg.meity.gov.in)

Online Quiz

Details: Web Application for conducting an Online Quiz by the students who visit CeG (Centre for e Governance.)

Environment: PHP with Yii, MySql.

Tools: NetBeans, Mercurial, Bit Bucket, Vim editor, File Zila.

Responsibilities:

Full stack development of quiz application with admin module to perform administrative tasks like adding question, deleting question, editing questions, collecting feedback just after completion of quiz and showing the result in admin panel.

Stratbeans Consulting

Software Engineer (July 2013–Sep 2013)

Projects:

ATP (Autumn Test Pad) – (Web Application that is used for training the employees in any organization and evaluating the performance.)

Details: ATP is the tool which is used by any organization to train their employees and they're after evaluating their performance by conducting the test there are various roles in the Application. Like manager, Administrator, User etc.

Environment: PHP with Yii, MySQL.

Tools: NetBeans, Mercurial, Bit Bucket, Vim editor, FileZilla.

Responsibilities:

Solving New tickets and tickets are related to enhancing the current application in form of new development and changing the working of current application.

Vomozo

Details: Development of a web application which will be helpful for CAT aspirants.

Environment: PHP with Yii, MySql.

Tools: NetBeans, Mercurial, Bit Bucket, Vim editor, File Zila.

(www.vomozo.com)

Responsibilities:

Solving New tickets and tickets are related to enhancing the current application in form of new development and changing the working of current application.

I.I.T. Bombay

Jr. Software Engineer (Jan 2012 –Nov 2012)

Projects:

Empowerment for students through synchronous and asynchronous instructions.

National Mission

Look after the validation of JSP page in js and Java. Also look after the connectivity with database which is postgres. Also update the database on regular intervals.

<http://www.it.iitb.ac.in/nmeict/home.do>

Environment: Linux, JavaScript, PostgreSQL, Java.

Achievements

IIT Bombay used to conduct workshops in around 180 remote centers in India where any teacher or Phd student can register themselves to attend the workshop. Participants also use to provide their 3 preference of remote center.

Developed a module which will automatically allot seat to a participant in his preferred remote center in case it is available on first come first serve basis.
